I'm learning Abaqus scripting with the Abaqus scripting reference guide. Not a beginner in Abaqus, but the scripting part is pretty new to me. To apply local seeds to a flange, I'd like to select edges along the Z-direction of my part. It does work with the findAt command.

~~Abaqus scripting getting edges via getbyBounding Command ...~~

This is a good starting point to create a script. The first step towards creating a script is therefore to open Abaqus/CAE and do whatever needs to be automated there. In this case, I will create and save some images. As example files, I use 4 beams with different mesh densities. They are created using python scripting as described in Tutorial 25. The image I save involves 3 viewports with different outputs and views
