The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the very beginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The

Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. “ Some of the key concepts discerned in the study, ” comments Jim Collins, “fly in the face of our modern business culture and will, quite frankly, upset some people. ” Perhaps, but who can afford to ignore these findings?

There is significant evidence that an effective organizational culture provides a major competitive edge—higher levels of employee and customer engagement and loyalty translate into higher growth and profits. Many business leaders know this, yet few are doing much to improve their organizations ' cultures. They are discouraged by misguided beliefs that an executive ' s tenure and an organization ' s attention span are too short for meaningful transformation. James Heskett provides a roadmap for achievable and fast-paced culture change. He demonstrates that an effective culture supplies the trust that makes managing change of all kinds easier. It provides a

foundation on which changes in strategy can be based, and it ' s a competitive edge that can ' t easily be hacked or copied. Examining leading companies around the world, Heskett details how organizational culture makes employees more loyal, more productive, and more creative. He discusses how to quantify its effects in order to sell the notion of culture change to the organization and considers how to preserve an organization ' s culture in the face of the trend toward remote work hastened by the COVID-19 pandemic. Showing how leadership can bring about significant changes in a surprisingly short time span, Win from Within offers a playbook for developing and deploying culture that enables outsized results. It is a groundbreaking demonstration of organizational culture ' s role as a foundation for strategic success—and its measurable impact on the bottom line.

How do firms compete? How do firms earn above normal returns? What's needed to sustain superior performance long term? An increasingly powerful answer to these fundamental questions of business strategy lies in the concept of dynamic capabilities. These are the skills, processes, routines, organizational structures, and disciplines that enable firms to build, employ, and orchestrate intangible assets relevant to satisfying customer needs, and which cannot be readily replicated by competitors. Enterprises with strong dynamic capabilities are intensely entrepreneurial. They not only adapt to business ecosystems; they also shape them through innovation, collaboration, learning, and involvement. David Teece was the pioneer of the dynamic capabilities perspective. It is grounded in 25 years of his research, teaching, and consultancy. His ideas have been influential in business strategy, management, and economics, and are relevant to innovation, technology management, and competition policy. Through his consultancy and advisory work he has also brought these ideas to bear in business and policy making around the world. This book is the clearest and most succinct statement of the core ideas of dynamic capabilities. Teece explains their genesis, application, and how they offer an alternative approach to much conventional strategic thinking grounded in simplistic and outdated understandings of industrial organizations and the foundations of competitive advantage. Accessibly written and presented, it will be an invaluable and stimulating tool for all those who want to understand this important contribution to strategic thinking, be they MBA students, academics, managers, or consultants.

'Generative Emergence' provides insight into the non-linear dynamics that lead to organizational emergence through the use of complexity sciences. The book explores how the model of generative emergence could be applied to enact emergence within and across organizations.

This book develops a new paradigm in the field of leadership studies, referred to as the "leadership-as-practice" (L-A-P) movement. Its essence is its conception of leadership as occurring as a practice rather than residing in the traits or behaviours of particular individuals. A practice is a coordinative effort among participants who choose through their own rules to achieve a distinctive outcome. It also tends to encompass routines as well as problem-solving or coping skills, often tacit, that are shared by a community. Accordingly, leadership-as-practice is less about what one person thinks or does and more about what people may accomplish together. It is thus concerned with how leadership emerges and unfolds through day-to-day experience. The social and material contingencies impacting the leadership constellation – the people who are effecting leadership at any given time – do not reside outside of leadership but are very much embedded within it. To find leadership, then, we must look to the practice within which it is occurring. The leadership-as-practice approach resonates with a number of closely related traditions, such as collective, shared, distributed, and relational leadership, that converge on leadership processes. These approaches share a line of inquiry that acknowledges leadership as a social phenomenon. The new focus opens up a plethora of research opportunities encouraging the study of social processes beyond influence, such as intersubjective agency, shared sense-making, dialogue, and co-construction of responsibilities.
