7. Documenting Python¶ The Python language has a substantial body of documentation, much of it contributed by various authors. The markup used for the Python documentation is reStructuredText, developed by the docutils project, amended by custom directives and using a toolset named Sphinx to post-process the HTML output.

of the built-in functions and modules are described in The Python Standard Library. For an informal introduction to the language, see The Python Tutorial.

The Python Language Reference
— *Python 3.9.0 documentation*

The Python standard library is conservative and requires limiting lines to 79 characters (and docstrings/comments to 72). The preferred way of wrapping long lines is by using Python's implied line continuation inside parentheses, brackets and braces. Long lines can be broken over multiple lines by wrapping expressions in parentheses.

keep the merits of the old turtle module and to be (nearly) 100% compatible with it.

turtle — Turtle graphics — Python 3.9.0 documentation

`vformat` (`format_string`, `args`, `kwargs`) ¶. This function does the actual work of formatting. It is exposed as a separate function for cases where you want to pass in a predefined dictionary of arguments, rather than unpacking and repacking the dictionary as individual arguments using the `*args` and `**kwargs` syntax. `vformat()` does the work of breaking up the format string into character data and ...
