Separation science, or chromatography, can be analytical or preparative. Analytical chromatography relies on small amounts of material and strives to measure the relative amounts of analytes in a mixture. No attempt is made to ready the material for future use. Preparative chromatography, on the other hand, seeks to separate a mixture into usable component parts. Preparative chromatography can be done on a small scale or an industrial scale. Consciousness is found wherever there are lifeforms engaging in the dance of separation, it is a feature of our unfolding universe rather than of truly separate individuals. Consciousness can be seen to be like an array of spotlights, illuminating the world where they exist, but the light is coming from the play of the universe, not from the individual organism.
