Total hip replacement is a step-by-step surgery to replace the hip socket and the ball at the top of the thighbone (femur). Doctors use metal, ceramic, or plastic replacement parts. The parts may be attached to the bones in one of two ways. They may be: Cemented to the bone. Uncemented. These parts have a porous coating that the bone grows into.

Total Hip Replacement Surgery | Kaiser Permanente

Covers surgery to replace ends of both bones in a damaged joint to create new joint surfaces. Includes slideshow on hip replacement. Looks at why it is done and how well it works. Discusses what to expect after surgery and living with a hip replacement.

Total Hip Replacement Surgery | Kaiser Permanente

Here's how hip replacement surgery is done... The thighbone is separated from the hip bone, and the cartilage is removed from the hip socket. Then the head and neck of the thighbone are removed. A new hip socket will be put into your hip bone.

Same-Day Total Hip Replacement Experience | Kaiser Permanente

Hip replacement surgery uses metal, ceramic, or plastic parts to replace the ball at the top of the thighbone (femur). In a total hip replacement, the doctor also replaces the hip socket. In a partial hip replacement, the socket is not replaced. For traditional surgery, your doctor will make a 6- to 10-inch cut (incision) on the side or the back of your hip.

The Hip Kit can be purchased from the Kaiser Permanente Health Education Offices at either: 1600 Eureka Rd, Bldg C, 1st floor or Point West 1650 Response Road, 1stfloor. Other medical supply stores in the community may also carry these kits. It would be beneficial to try your new equipment at home before surgery. 4

total hip replacement - Kaiser Permanente

Controversies in Hip Replacement. Total hip surgery has been extremely successful, with patient satisfaction rates of well over 90%. Hip replacements can be placed with or without bone cement, but becauseuncemented implants have been so successful, there is no longer controversy about the use. Most hip sockets are replaced with uncemented implants, since these have beenir shown to be more durable and to be easier to revise than cemented sockets.

Controversies in Hip Replacement - Kaiser Permanente

Anterior hip replacement surgery is done through a small incision in the front (anterior) of the hip. This causes less damage to muscles and other soft tissues than the more common type of surgery. There is also a lower risk of the new ball on the thighbone slipping out of the hip socket (dislocation).
