OpenVMS is a multi-user, multiprocessing virtual memory-based operating system designed for use in time-sharing, batch processing, and transaction processing. It was first released by Digital Equipment Corporation in 1977 as VAX/VMS for its series of VAX minicomputers. Since 2014 OpenVMS is developed and supported by a company named VMS Software Inc.. In addition to VAX systems, OpenVMS also runs on DEC Alpha systems, the Itanium-based HPE Integrity family of computers, and select x86-64 hardware

If any source can be named for the VMS code, it must be pointed out that VAX/VMS owes its existence to the STAR project as an extension of RSX-11. Many of the commands and internal operating system calls from RSX-11 are directly available in OpenVMS.
