Instead of a linear model, Wheeler developed a cyclical model.

Evaluation in Wheeler's model is not terminal.

Findings from the evaluation are fed back into the objectives and the goals, which influence other stages.

his book

cyclical process in  
which each  
element of the  
curriculum is  
related and  
interdependent.

In 1949, a small

Of Curriculum Development  
book had a big impact on education. In just over one hundred pages, Ralph W. Tyler presented the concept that curriculum should be dynamic, a program under constant evaluation and revision.

Curriculum had

always been thought of as a static, set program, and in an era preoccupied with student testing, he offered the innovative idea that teachers and administrators should spend as much time evaluating their plans as they do

assessing their  
students. Since  
then, Basic

Principles of  
Curriculum and  
Instruction has  
been a standard  
reference for  
anyone working  
with curriculum  
development.  
Although not a  
strict how-to guide,  
the book shows

how educators can  
critically approach  
curriculum

planning, studying  
progress and  
retooling when  
needed. Its four  
sections focus on  
setting objectives,  
selecting learning  
experiences,  
organizing  
instruction, and  
evaluating

progress. Readers will come away with a firm understanding of how to formulate educational objectives and how to analyze and adjust their plans so that students meet the objectives. Tyler also explains that curriculum

# Online Library Wheeler Model

planning is a continuous, cyclical process, an instrument of education that needs to be fine-tuned. This emphasis on thoughtful evaluation has kept Basic Principles of Curriculum and Instruction a relevant, trusted

In an age where young people seem to have a natural affinity with smartphones, computer games and social media, teachers and lecturers face a big challenge - or a

golden opportunity.

How can new

engage students  
and motivate them  
to sustain a lifelong  
career in learning?

For educators  
everywhere, our  
challenge is to take

make a difference.  
The proliferation of digital technologies and cultures is having a profound impact on learning, prompting questions which need answers. How will technology change our conceptions of learning? How will new ways of

technology? How  
will teachers and  
lecturers' roles  
change; what will  
they need to know;  
and what will we  
see learners doing  
in the future?

Grounded in his  
research and in  
pedagogical  
theory, Steve
